There's always a better way to handle localization

Eemeli Aro

```
{ "json": "is not
always the most
human-friendly format
for your data" }
```

especially:
  if you need to deal
  with non-developers
  like translators

```
<Message
   id="api.options"
   exists={true}
/>
```

```
<Messages id="api">
   {msg => (
      msg.renderProps()
   )}
</Messages>
```

- react-intl (FormatJS)
- react-i18next (i18next)
- react-message-context (messageformat)
- ...
